# Hannah Weiss

hannah.weiss@example.com | Minneapolis, MN | (612) 555-0126 | github.com/hweiss-ml

## MACHINE LEARNING PROJECTS

**Retail Demand Forecasting** Jan-Apr 2026

*Python, scikit-learn, LightGBM*

- Built baseline and gradient-boosted forecasting models for 48 store-item pairs using calendar, price, and promotion features.
- Compared MAE across sparse and high-volume products and wrote a short model-card-style summary of failure modes.

**Support Ticket Classifier** Oct-Dec 2025

*NLP project*

- Fine-tuned a small transformer model to route simulated support tickets into billing, login, integration, and bug categories.
- Added confidence thresholds so low-confidence tickets were flagged for human review rather than auto-routed.

## TECHNICAL SKILLS

Python, pandas, scikit-learn, PyTorch, SQL, MLflow, Jupyter, Git, Tableau

## WORK EXPERIENCE

**Business Intelligence Analyst, Prairie Market Foods** July 2023-Present

*Minneapolis, MN*

- Maintain weekly sales dashboards for merchandising managers covering 86 stores and 14 product categories.
- Partner with replenishment planners to investigate outlier stockouts and promotion lift assumptions.
- Automated recurring CSV cleanup steps with Python, reducing dashboard prep from four hours to 45 minutes.

**Category Analyst Intern, Prairie Market Foods** May-Aug 2022

*Minneapolis, MN*

- Reviewed seasonal sales trends and created Excel summaries for bakery and frozen-food category reviews.

## EDUCATION

**University of Minnesota** May 2023

*Bachelor of Science in Statistics*

- Minor in Computer Science

## SELECTED COURSEWORK

Machine Learning, Regression Analysis, Database Systems, Experimental Design, Data Visualization

## ANALYTICS PROJECTS AT WORK

**Promotion Lift Review** 2025

*Prairie Market Foods*

- Compared promoted and non-promoted product families across store clusters to identify where assumed lift overstated actual demand.
- Created a Tableau view that let category managers inspect outliers before finalizing seasonal buy plans.

**Store Clustering Experiment** 2024

*Internal analysis*

- Grouped stores by basket size, weekday traffic, and seasonal category mix to improve peer comparisons in weekly dashboards.
- Documented limitations around rural stores and new locations with incomplete historical data.
