SUMMARY

Senior platform engineer with 18 years of experience modernizing data-intensive systems for logistics, payments, and enterprise operations.

TECHNICAL TOOLKIT

Languages: Python/Django, Java, Go, TypeScript, SQL, Bash

Platforms: AWS/GCP, Kubernetes, Docker, PostgreSQL, Kafka, Redis, Snowflake, Datadog, Terraform, GitHub Actions, CI/CD pipelines

PROFESSIONAL EXPERIENCE

Principal Software Engineer, Northstar Freight Systems

Feb 2018-Present

Austin, TX

- Led a 9-engineer modernization of shipment-rating services from a nightly batch process to event-driven APIs handling 4.2M quotes per month.
- Reduced incident response time by 38% by standardizing service dashboards, log correlation, and escalation playbooks across six teams.
- Designed a PostgreSQL partitioning strategy that cut invoice reconciliation queries from 22 minutes to under 90 seconds.
- Mentored staff engineers on technical design reviews, migration plans, and production readiness checklists.

Senior Backend Engineer, Meridian Payments

Jul 2011-Jan 2018

Denver, CO

- Built Java services for merchant onboarding, risk review, and settlement reporting used by 14K small-business accounts.
- Implemented idempotency keys and audit logging that reduced duplicate payout corrections by 71% during peak retail periods.
- Partnered with compliance and finance teams to translate NACHA rule changes into testable engineering requirements.

Software Developer, Arrowline Manufacturing

Jun 2007-Jun 2011

Cleveland, OH

- Maintained ASP.NET and SQL Server applications for production scheduling, quality checks, and inventory transfers.
- Created Crystal Reports used by plant supervisors to compare scrap rates across three assembly lines.

EDUCATION

University of Colorado Boulder

May 2007

Bachelor of Science in Computer Science

PROFESSIONAL AFFILIATIONS

Association for Computing Machinery; Austin Cloud Native Meetup organizer

SELECTED IMPACT

Reliability and Migration Planning

2021-2026

Cross-team architecture work

- Authored migration plans for three legacy services, including rollback criteria, data validation checks, and customer-support communication steps.
- Introduced lightweight architecture decision records that made tradeoffs visible across product, operations, and compliance stakeholders.

Developer Enablement

2019-Present

Internal platform practice

- Built reusable service templates with logging, health checks, metrics, and deployment defaults, reducing new-service setup time from days to hours.
- Led monthly production-readiness reviews for teams launching new event consumers and external partner APIs.
